INTRODUCTION

Cybersecurity Intelligence for Modern Organizations

In the dynamic cybersecurity arena, organizations are continually pressed to defend their digital environments against the dual threats of unauthorized access and emerging cybersecurity risks.

RedRok's Insight emerges as a formidable ally in this ongoing battle, offering a robust cybersecurity scanner that is meticulously engineered to meet these challenges. This whitepaper explores the distinct capabilities of Insight, highlighting its precision in monitoring Active Directory, its efficiency in automating security scans, and its thorough approach to managing the security of shared files and permissions. These key features are essential for any enterprise aiming to secure its digital boundaries and ensure a resilient security posture.

Insight

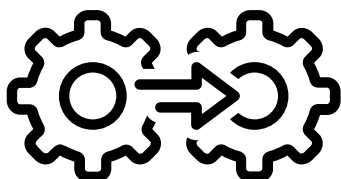

THREAT DETECTION PAIRED WITH SECURITY RECOMMENDATIONS

Know your true vulnerabilities and security gaps.

Insight offers a multifaceted approach that seamlessly integrates into an organization's framework. With its robust set of tools, from vigilant scanning to real-time anomaly detection Insight ensures business continuity and proactive cyber defense.

Feature	Activity	Outcome
Active Directory Monitoring	Continuously monitor your AD for role and permission escalations.	Maintains the integrity of access controls, and ensure digital compliance.
Automated Security Scans	Automated scanning protocols to identify potential internal threats	Ensured organizational operability and proactive threat management.
Shared files and folders internal monitoring	Scan and monitor shared network resources for unauthorized changes and malicious content	Ensure the integrity and safety of shared data, promptly remove any malicious files.
Role and Permission Monitoring (AD)	Continuously monitor changes in organizational internal structure and configuration.	Alarms triggered for any deviations, ensuring organizational structure remains intact.

ON-PREMISES SYSTEM OVERVIEW

INSIGHT SCANNER

- Operates on any Windows-based system (Minimum 8GB RAM requirement).
- Functions autonomously, independent of other components.
- Mandates a valid license for operation.
- Optional feature allows database location configuration, including host and credentials.

SUPPORTED DATABASE TYPES

Insight integrates seamlessly with MySQL, MSSQL, and Elastic databases, catering to a broad spectrum of organizational needs.

DASHBOARD

- Operates over the IIS, providing a clear display of all data secured in the database.
- Eliminates the need for client or endpoint agent installations, ensuring a streamlined user experience.

Insight

SUMMARY

RedRok's Insight is an advanced cybersecurity scanner that investigates, monitors, and provides detailed analysis of your internal network environment. It proactively identifies AD roles and permissions vulnerabilities, suspicious user behavior, and potentially harmful shared files. By integrating Insight, organizations can promptly address potential security gaps and enhance their cybersecurity posture to gain comprehensive insights for proactive defense. With insight, organizations can gain a bird's-eye view of anomalies and unusual behavior and ensure ongoing protection and control over the entire internal network domain.
